

AI Customer Support Command Center (2026 Edition)

Product subtitle

The 35-prompt + 12-checklist system that turns a 3-person support team into a self-service content engine -- using Copy.ai, Canva, Synthesia, Speechify, and Surfer.

Description (sales copy)

Your support inbox fills with the same five questions rephrased forty different ways. You write a help center article, the tickets drop for a week, then a new cohort arrives and the same questions flood back. Most support teams solve this by hiring more agents. The teams that actually win in 2026 solve it by building a self-service content engine that writes, illustrates, narrates, and ranks its own help center -- without burning out the three people who already know the product inside out.

****The AI Customer Support Command Center**** is the exact system AI ToolKit uses to run customer support content production in 2026. Inside you get 35 ready-to-copy prompts and 12 production checklists covering the five jobs that actually deflect tickets:

1. Help center article writing -- structured, scannable, deflection-ready articles from ticket threads and product briefs.
2. Annotated screenshots and instructional visuals -- branded step-by-step graphics without a designer.
3. AI video walkthroughs and multilingual onboarding -- 60-90 second tutorials without a camera or studio.
4. Audio versions and accessibility -- natural AI-narrated help docs for visually impaired and audio-first customers.
5. Help center SEO -- ranking articles when customers Google their problems instead of searching your knowledge base.

Every prompt is built for the affiliate tools we recommend and test: Copy.ai, Canva, Synthesia, Speechify, and Surfer. Drop each prompt into the tool, fill in the bracketed fields, and publish.

No blank-page syndrome. No 500-tool research spiral. Just a repeatable 90-minute weekly workflow that deflects 100-300 tickets per month.

What you get:

- 35 copy-paste AI prompts (PDF + Markdown)
- 12 weekly production checklists
- 90-minute help center content workflow
- Tool-stack map with free-vs-paid picks
- Affiliate-free alternatives for non-partner tools

Price: \$17

Format: Instant digital download

License: Personal use only.

The AI Customer Support Command Center

35 Prompts + 12 Checklists for Help Articles, Visuals, Video, Audio, and SEO

****For:**** SaaS support teams, customer success teams, help center writers, knowledge base managers, and product-led growth companies

****Built around:**** Copy.ai, Canva, Synthesia, Speechify, Surfer

****Outcome:**** A 90-minute weekly workflow that produces a complete help asset -- article, screenshots, video, audio, and SEO -- from one support ticket.

Part 1 -- Copy.ai prompts (help articles, macros, and email)

1. Ticket-to-article pipeline

Three customers submitted the same question this week. Here are their ticket threads:

TICKET 1: [PASTE FULL TICKET THREAD]

TICKET 2: [PASTE FULL TICKET THREAD]

TICKET 3: [PASTE FULL TICKET THREAD]

Write a help center article that answers all three phrasings. Structure:

- H1: The question phrased the way a customer would type it into Google (under 70 chars)
- One-paragraph answer (2-3 sentences) at the top for scanners
- Numbered step-by-step walkthrough
- "What to do if this didn't work" troubleshooting section with 2-3 branches
- Related articles (3 suggestions at the bottom)

Tone: clear, calm, no jargon. Assume the reader is not technical.

2. Help center article from release notes

We just shipped this feature. Here are the internal release notes:

[PASTE RELEASE NOTES]

Write a help center article that explains the new feature to existing users. Structure:

- H1: What the feature does, in plain English (under 70 chars)
- 2-sentence "what changed and why it matters" intro
- "How to use it" section with 3-5 numbered steps
- "Before you start" prerequisites box (permissions, plan requirements, integrations)
- 2 FAQ entries (anticipate the most common confusion points)
- One-paragraph "what's not changing" reassurance for users worried about disruption

Tone: informative, confident, no marketing language.

3. Ticket macro (reusable reply template)

Write a ticket macro (reusable reply template) for this common question:

QUESTION: [DESCRIBE THE COMMON QUESTION]

The macro should:

- Start with a 1-sentence direct answer (no "Thank you for reaching out" filler)
- Include 3-5 numbered steps if the answer involves actions
- End with a "If this didn't work" branch pointing to escalation or a related help article
- Be under 150 words (agents will paste and lightly edit this)
- Use bracketed placeholders for [CUSTOMER NAME], [PRODUCT NAME], and [LINK]

Provide 3 tone variants:

1. Friendly (for B2C consumer apps)
2. Professional (for B2B SaaS)
3. Empathetic (for billing, cancellation, or frustration-prone tickets)

4. Escalation summary (tier-1 to tier-2)

A tier-1 support agent needs to escalate this ticket to tier-2 / engineering. Here is the full ticket thread:

[PASTE TICKET THREAD]

Write an escalation summary that a tier-2 engineer can read in 30 seconds and start debugging. Structure:

- 1-sentence problem statement (what the customer is trying to do and what's blocking them)
- Customer environment: [PLAN], [BROWSER/DEVICE], [INTEGRATIONS if known]
- Reproduction steps (numbered, exact clicks)
- Expected behavior vs. actual behavior (1 sentence each)
- Error message or status code (if any)
- What tier-1 already tried (list the troubleshooting steps already attempted)
- Suggested investigation area (logs, API response, config, database) -- best guess

Format: 5-8 sentences max. No customer-friendly tone -- this is internal engineering communication.

5. Release-note summary for customers

Transform these internal engineering release notes into a customer-facing summary.

INTERNAL NOTES: [PASTE ENGINEERING RELEASE NOTES]

Write a release-note summary for the customer changelog or product newsletter. Structure:

- Headline: the user-facing benefit (not the technical change), under 60 chars
- 1-paragraph "what's new" in plain English (no internal jargon, no ticket numbers)
- 3-5 bullet points of the most impactful changes, each starting with a verb
- "What this means for you" callout (does this require action? do they need to update? is anything breaking?)

- Link placeholder to the full help center article

Tone: excited but honest. No "we're thrilled to announce" -- just what changed and why it matters.

6. Knowledge base category landing page

Write the landing page copy for a help center category page.

CATEGORY: [e.g., "Billing and Payments" or "Integrations" or "Getting Started"]

PRODUCT: [PRODUCT NAME]

ARTICLES IN THIS CATEGORY: [LIST 5-10 ARTICLE TITLES]

Structure:

- H1: Category name (under 60 chars)
- 1-sentence intro: what this section covers and when you'd need it
- "Popular articles" list (pick the 3 most-visited from the list above)
- "Browse by topic" sub-category suggestions if the category is large
- Search prompt: "Can't find what you need? Search [PRODUCT] help center ->"
- Contact CTA at the bottom (only if the self-serve articles don't resolve the issue)

7. Troubleshooting decision tree

Create a troubleshooting decision tree for this support issue:

ISSUE: [DESCRIBE THE ISSUE, e.g., "User can't log in" or "Webhook not firing"]

Structure as a flowchart-style article:

- H1: The problem statement as a customer would phrase it
- "Quick fix" box: the 1 most common cause and its 30-second fix (if applicable)
- Decision tree (format as nested lists):
 - IF [symptom A] -> Try [fix A] -> If that works, done. If not, continue.
 - IF [symptom B] -> Try [fix B] -> If that works, done. If not, continue.
 - IF [symptom C] -> This requires [escalation / specific team] -> Contact [channel]
- "Still stuck?" CTA at the bottom with the specific information to include when reaching out (account ID, err or message, screenshots)

Keep it scannable -- customers in troubleshooting mode do not read paragraphs.

8. In-app empty state copy

Write the copy for an in-app empty state (the screen users see when a feature has no data yet).

FEATURE: [FEATURE NAME]

PRODUCT: [PRODUCT NAME]

WHAT TRIGGERS THIS EMPTY STATE: [e.g., "User hasn't created any projects yet" or "No search results found"]

Write:

- Headline (under 40 chars, action-oriented, not apologetic)
- Subtext (1-2 sentences explaining what to do next, no more than 120 chars)
- Primary CTA button text (2-4 words, action verb)
- Optional secondary link text (e.g., "Watch a 60-second tutorial" or "Import from CSV")

Provide 3 tone variants:

1. Encouraging (for onboarding -- first-time users)
2. Neutral (for power users who just cleared their data)
3. Apologetic (for error states -- "no results found")

9. Churned customer re-engagement email

Write a re-engagement email sequence for a customer who churned [N] months ago.

PRODUCT: [PRODUCT NAME]

CHURN REASON (if known): [PRICE / TOO COMPLEX / MISSING FEATURE / COMPETITOR / UNKNOWN]

KEY IMPROVEMENT SINCE CHURN: [WHAT IMPROVED -- new feature, price drop, UX overhaul, integration]

Write a 3-email sequence:

Email 1 (Day 1): "We fixed [the thing]" -- acknowledge what likely drove them away, show what changed, offer a 14-day trial reactivation. Subject under 50 chars.

Email 2 (Day 7): "Here's what you missed" -- 3 bullet points of high-impact improvements since they left, link to a 90-second "what's new" video. Subject under 50 chars.

Email 3 (Day 14): "Last chance" -- urgency, offer expires, 1-sentence case study of a similar customer who returned. Subject under 50 chars.

Tone: honest, no "we miss you" sentimentality. Focus on what changed and why it matters now.

10. CSAT follow-up email

Write a CSAT (customer satisfaction) follow-up email.

CONTEXT: The customer just had a support interaction and rated it [RATING: 1-5 stars].

PRODUCT: [PRODUCT NAME]

Write 2 versions:

VERSION A -- For 4-5 star ratings:

- Thank them briefly (1 sentence, no exclamation marks)
- Ask for one specific piece of feedback: "What made this helpful?" (to surface what's working)
- Optional: ask for a public review (G2, Capterra) with a direct link
- Under 80 words total

VERSION B -- For 1-3 star ratings:

- Acknowledge without defending (1 sentence)
- Ask: "What could we have done better?" (open-ended, not multiple-choice)
- Offer a direct line: "If you're still stuck, reply to this email and it goes to [escalation contact / team lead] -- not back into the queue"
- Under 100 words total

Tone: professional, no groveling, no corporate "we hear you."

11. Feature announcement banner copy

Write in-app announcement banner copy for a new feature launch.

FEATURE: [FEATURE NAME]

WHAT IT DOES: [1-SENTENCE DESCRIPTION]

WHO IT'S FOR: [ALL USERS / SPECIFIC PLAN / POWER USERS]

Write 3 banner variants (each is a complete unit: icon emoji + headline + subtext + CTA):

1. Announcement banner (appears at top of dashboard for 2 weeks after launch)
 - Emoji: [relevant icon]
 - Headline: under 50 chars
 - Subtext: under 80 chars (the benefit, not the feature)
 - CTA: "Try it" or "Learn more"
2. Tooltip popup (appears when user hovers over the feature for the first time)
 - 2-sentence explanation
 - "Got it" dismiss button
3. Email teaser (sent 3 days before launch to all users)
 - Subject: under 50 chars
 - 1-paragraph body (under 60 words)
 - CTA: "See how it works" (links to Synthesia video tutorial)

12. Onboarding email sequence

Write a 5-email onboarding sequence for a new [PRODUCT NAME] customer.

PRODUCT: [PRODUCT NAME]

PLAN: [FREE TRIAL / STARTER / GROWTH]

KEY AHA MOMENT: [THE ACTION THAT MAKES THE PRODUCT STICK -- e.g., "first automation runs successfully" or "first report shared with team"]

TIME TO AHA: [EXPECTED MINUTES/HOURS]

Email 1 (Welcome + immediate action, sent at signup):

- Confirm they're in, state the one action to take in the next 5 minutes
- Link to the 60-second getting-started video (Synthesia)
- Subject under 50 chars

Email 2 (Day 1 -- First win):

- Reference the action from Email 1, show the next step
- Include 1 "you might also try" tip
- Subject under 50 chars

Email 3 (Day 3 -- The aha moment):

- Guide them to the key feature that drives retention
- 3 numbered steps to reach the aha moment
- Link to the help center article for the feature
- Subject under 50 chars

Email 4 (Day 7 -- Power move):

- Show 1 advanced use case they haven't discovered
- Reference what they've already done (personalize if possible)
- Subject under 50 chars

Email 5 (Day 14 -- Trial ending or value recap):

- Recap what they've accomplished (list 3 things)
- If trial: state what they lose if they don't convert, offer upgrade CTA
- If paid: ask for feedback, offer a power-user tip
- Subject under 50 chars

Tone: helpful peer, not marketing. No "we're so excited to have you." Each email under 120 words.

13. FAQ section builder

From this help center article, extract and write a 5-question FAQ section.

ARTICLE: [PASTE HELP CENTER ARTICLE TEXT]

Write 5 Q&A pairs that:

- Anticipate the most common follow-up questions a reader would have after following the main guide
- Phrase each question the way a customer would actually ask it (not the way an engineer would phrase it)
- Answer each in 2-3 sentences max -- no full walkthroughs, just the direct answer
- If the answer requires more detail, link to a related article placeholder

Format:

***Q:** [question]**

A: [answer]

Order them by frequency (most common first).

14. Localization-ready article rewrite

Rewrite this help center article to be localization-friendly for translation into 5+ languages.
ARTICLE: [PASTE ARTICLE TEXT]
Apply these rules:

- Replace idioms ("once you've got that sorted," "jump into," "heads up") with literal phrasings
- Replace sports/cultural metaphors with universal descriptions
- Shorten sentences to under 20 words (translation engines handle short sentences better)
- Replace gerunds ("we'll be setting up your workspace") with imperative ("set up your workspace")
- Replace passive voice with active voice
- Replace contractions ("you'll," "we've") with full forms ("you will," "we have")
- Keep all product names, button labels, and UI element names as-is (these stay in English)

Output the rewritten article, then list the 5 most significant changes you made and why they help translation.

15. Deflection metrics summary (for internal reporting)

Summarize this month's help center deflection data for a monthly support metrics report.
DATA: [PASTE TICKET VOLUME, ARTICLE VIEWS, DEFLECTION RATE, TOP ARTICLES, TOP SEARCH QUERIES]
Write a 1-page summary with:

- Headline metric: "X tickets deflected this month" (with the calc: article views × historical deflection rate)
- Top 3 deflection articles (title + views + estimated tickets deflected)
- Bottom 3 underperforming articles (title + views + recommended action: update, merge, or archive)
- Search queries with high volume but no matching article (= content gaps to write next month)
- One-paragraph narrative for the VP: what's working, what's not, what to prioritize next month

Keep it under 300 words total. No charts needed -- this is a text summary.

Part 2 -- Canva prompts (annotated screenshots and visuals)

16. Annotated screenshot guide

Design a step-by-step annotated screenshot guide for this help center article.
ARTICLE TOPIC: [e.g., "How to set up two-factor authentication"]
SCREENSHOTS NEEDED: [3-5 raw screenshots of the product flow]
For each screenshot, describe:

1. What part of the screen to capture (crop boundaries)
2. Numbered circle placement (which UI elements get a number, in what order)
3. Arrow callouts (which elements to point at, what the arrow says)
4. Highlight box (which area to outline in brand color)
5. Caption text (one line under each screenshot, under 80 chars)

Export settings: PNG, 2x resolution for retina displays, max 200KB per image.
Brand colors: [PRIMARY HEX], [ACCENT HEX]
Brand font: [FONT NAME]

17. Help center PDF quick-reference card

Design a one-page printable quick-reference card (8.5" x 11") for this feature.
FEATURE: [FEATURE NAME]
KEY STEPS: [3-5 NUMBERED STEPS]
COMMON PITFALLS: [2-3 THINGS USERS GET WRONG]
Layout:

- Header: feature name + product logo, brand colors
- Left column: numbered steps with mini-screenshot icons
- Right column: "Watch out for" pitfall box with warning icons
- Footer: "Need more help?" with help center URL and support email
- Color: brand primary for headers, accent for callouts, white background
- Font: [BRAND FONT] for headers, system sans-serif for body

Output as a print-ready PDF. This goes in the help center as a downloadable attachment.

18. Onboarding checklist visual

Create a visual onboarding checklist for new [PRODUCT NAME] users.
PRODUCT: [PRODUCT NAME]
ONBOARDING STEPS: [5-8 STEPS FROM SIGNUP TO AHA MOMENT]
Design a 1080×1080 (Instagram-square format) visual:

- Title: "Your first 30 minutes with [PRODUCT]"
- 5-8 checklist items, each with:
 - Checkbox icon (unfilled)
 - Step name (under 30 chars)
 - 1-sentence description (under 60 chars)
- Progress bar at 0% at the top

- Brand colors: [PRIMARY], [ACCENT], [BACKGROUND]
- Footer: [PRODUCT] logo + "aitoolkit-blog.vercel.app"
This image goes in the onboarding email and the help center landing page.

19. Feature comparison infographic

Design a feature comparison infographic for the help center.
COMPARE: [PLAN A vs PLAN B] or [OLD WAY vs NEW WAY] or [PRODUCT vs MANUAL PROCESS]
Layout (1200x630, landscape):
- Title: "[Comparison headline]" under 60 chars
- Two-column comparison table:
 - Left column: [Old/Basic/Manual]
 - Right column: [New/Premium/Automated]
- 5-6 rows comparing key attributes
- Bottom: "Switch to [X]" CTA or "Learn more" link
- Brand colors: [PRIMARY] for the "better" side, [MUTED] for the "worse" side
Export: PNG, 2x resolution, optimized for web (under 150KB).

20. In-app tooltip visual

Design an in-app tooltip visual for a first-time user encountering this feature.
FEATURE: [FEATURE NAME]
WHAT THE USER SEES: [DESCRIBE THE SCREEN]
WHAT THE TOOLTIP SHOULD EXPLAIN: [1-2 SENTENCES]
Create:
- A tooltip callout graphic (rounded rectangle with a pointer)
- Tooltip text (under 80 chars, plain English, no jargon)
- Placement indicator (which corner or side of the screen)
- "Got it" button (dismiss)
- Optional "Take the tour" button (links to onboarding flow)
Use brand colors for the tooltip background with white text. Pointer should point to the UI element being explained.

Part 3 -- Synthesia prompts (AI video tutorials)

21. 60-second feature walkthrough script

Write a 60-second AI video tutorial script for this feature.
FEATURE: [FEATURE NAME]
PRODUCT: [PRODUCT NAME]
TARGET AUDIENCE: [NEW USERS / EXISTING USERS MIGRATING FROM OLD UI]
Script structure (aim for ~150 words = 60 seconds at natural pace):
- 0-5 sec: Hook -- "Here's how to [do X] in [PRODUCT] in under a minute."
- 5-15 sec: Context -- why this matters, what problem it solves (2 sentences max)
- 15-50 sec: Step-by-step walkthrough (3-5 numbered steps, each with a screen-recording cue: "[SCREEN: show the user clicking X, then Y]")
- 50-60 sec: Wrap -- "That's it. Need more help? Check the full guide at [URL]."
Format for Synthesia:
- Paste this script into Synthesia as the narration.
- Choose an avatar that matches your brand voice.
- Add the screen recordings as overlay video in the Synthesia editor.
- Generate in English first, then use AI dubbing for [LANGUAGES YOU SUPPORT].
Avatar style: [PROFESSIONAL / CASUAL / APPROACHABLE]
Background: clean studio or your brand color background

22. Onboarding video series master script

Write a 10-video onboarding series master script for [PRODUCT NAME].
PRODUCT: [PRODUCT NAME]
KEY FEATURES: [LIST 8-10 FEATURES A NEW USER NEEDS TO LEARN]
AHA MOMENT: [THE ACTION THAT DRIVES RETENTION]
For each of the 10 videos, write:
- Video number and title (under 50 chars, action-oriented: "How to [do X]")
- Duration target: 60-90 seconds each
- Script (120-180 words per video, formatted for Synthesia)
- Screen recording cue: "[SCREEN: show X, then Y]"
- Cross-link: which other video in the series to watch next
Order the series as a learning path:
1-3: Setup and first action
4-6: Core daily workflow
7-8: Power features

9-10: Integration and troubleshooting
Output as a table with columns: Video #, Title, Script, Screen Cue, Next Video

23. Multilingual onboarding video plan

Create a multilingual onboarding video production plan.

LANGUAGES NEEDED: [LIST 5+ LANGUAGES -- e.g., English, Spanish, French, German, Japanese, Portuguese]

VIDEO SERIES: [REFERENCE THE 10-VIDEO ONBOARDING SERIES FROM PROMPT 22]

Plan:

- Which videos to translate first (priority order based on customer base)
- Whether to use AI dubbing (faster, lower quality) or re-record with a native-speaker avatar (slower, higher quality)
- How to organize the video library (subdomain, YouTube playlist, or embedded in help center)
- Caption strategy (burned-in vs. toggleable -- accessibility implications)
- Maintenance plan: when the product UI changes, which videos need re-recording and in which languages

Output as a project plan with:

- Phase 1 (Month 1): which videos, which languages, estimated Synthesia credits
- Phase 2 (Month 2-3): expansion
- Maintenance: quarterly review checklist

24. Video vs. article decision guide

A support team has limited video production capacity. Help them decide which help center topics should be articles, which should be videos, and which should be both.

Write a decision framework:

INPUT: List of 20 support topics (paste them here: [PASTE TOPICS])

For each topic, classify as:

- ARTICLE ONLY: The topic is a simple lookup or short answer. Text + screenshot is sufficient. Video adds no value.
- VIDEO ONLY: The topic requires seeing a multi-step UI flow in motion. Text alone confuses more than it helps.
- BOTH: The topic is complex enough to warrant both formats -- article for scannable reference, video for first-time learners.
- INTERACTIVE: The topic is best served by an in-app guided tour, not a static article or video.

Decision criteria:

- If the answer is a single number or word -> Article only
- If the flow has 5+ sequential UI steps -> Video (or both)
- If the flow involves timing, animation, or "wait for X to load" -> Video
- If the topic is troubleshooting with many branches -> Article only (video can't branch)
- If the topic is onboarding/critical-path -> Both

Output: a table with columns: Topic, Classification, Rationale, Estimated Production Time

25. Feature explainer video script

Write a 90-second feature explainer video script.

FEATURE: [FEATURE NAME]

WHO IT'S FOR: [TARGET USER PERSONA]

THE PROBLEM IT SOLVES: [1-2 SENTENCES]

Script structure (~200 words = 90 seconds):

- 0-10 sec: Problem hook -- "If you've ever [describe the pain point], [FEATURE] fixes that."
- 10-25 sec: What it does -- 2-sentence plain-English explanation
- 25-60 sec: How it works -- 3-4 steps with screen recording cues
- 60-80 sec: Pro tip -- one advanced use case or shortcut
- 80-90 sec: CTA -- "Try [FEATURE] in [PRODUCT] today" or "Full guide at [URL]"

Synthesia settings:

- Avatar: [choose a professional, neutral avatar]
- Language: English first, plan for [LANGUAGES] dubbing
- Background: [BRAND COLOR or clean studio]
- Add lower-third: [FEATURE NAME] during the "how it works" section

Part 4 -- Speechify prompts (audio versions and accessibility)

26. Help article audio version

Convert this help center article into an audio version optimized for Speechify.

ARTICLE: [PASTE ARTICLE TEXT]

Prepare the text for narration:

- Remove markdown formatting symbols (keep the heading text but drop the # symbols)
- Replace "->" and "--" with "to" and "dash" for clean narration
- Add a 1-sentence intro: "This is the [ARTICLE TITLE] guide from [PRODUCT] help center."
- Add a 1-sentence outro: "For the full help center, visit [URL]."

- If the article has numbered steps, add "Step [N]" before each step for audio clarity
- Remove image captions and screenshot descriptions (they don't narrate well)
Speechify settings:
- Voice: [CHOOSE A NATURAL-SOUNDING VOICE FROM THE 1,000+ LIBRARY]
- Speed: 1.0x (default -- accessibility users may need slower)
- Language: match the article language
Output: the cleaned text ready to paste into Speechify + recommended voice type.

27. IVR (phone support) script

Write an IVR (interactive voice response) script for the [PRODUCT NAME] support phone line.
PRODUCT: [PRODUCT NAME]
SUPPORT HOURS: [HOURS]
TICKET-BASED OR PHONE-BASED: [SUPPORT MODEL]
Script structure:
- Greeting: "[PRODUCT] support. [HOURS NOTE]"
- Menu (max 5 options, no nesting beyond 1 level):
 1. [Most common issue 1]
 2. [Most common issue 2]
 3. [Most common issue 3]
 4. Billing
 0. Speak to an agent (if available)
- Hold message (if routing to agent): "You're [position] in queue. Average wait [X] minutes. While you wait, you can search our help center at [URL]."
- Voicemail (if no agents available): "All agents are [helping other customers / off-shift]. Leave a message with your account ID and issue, and we'll respond by [timeframe]."
Tone: calm, professional, no background music recommendations (those are production decisions).
For Speechify: narrate this script with a [WARM / PROFESSIONAL] voice at 0.9x speed for phone clarity.

28. Accessibility audit checklist

Create an accessibility audit checklist for a help center.
HELP CENTER URL: [URL]
NUMBER OF ARTICLES: [N]
CURRENT ACCESSIBILITY STATUS: [UNKNOWN / WCAG 2.1 AA PARTIAL / WCAG 2.1 AA COMPLIANT]
Checklist (30 items):
1. Every article has an audio version (Speechify or human-narrated)
2. Every image has alt text describing the screenshot content
3. Every video has closed captions (not auto-generated -- human-reviewed)
4. Every video has a text transcript below it
5. Color contrast meets WCAG 2.1 AA (4.5:1 for normal text)
6. No information is conveyed by color alone (always paired with text or icon)
7. Keyboard navigation works through all articles and menus
8. Focus indicators are visible on all interactive elements
9. Heading hierarchy is logical (H1 -> H2 -> H3, no skipped levels)
10. Link text is descriptive (no "click here" -- use "Read the billing guide")
11. Form fields in help center search have labels
12. Error messages are announced by screen readers (ARIA live regions)
13. Skip-to-content link is present
14. Language is declared in the HTML lang attribute
15. Content is readable at 200% zoom without horizontal scrolling
16. No content flashes more than 3 times per second
17. PDFs are tagged (not flat image scans)
18. Every table has a caption or summary
19. Every form has a submit button (not just Enter key)
20. Touch targets are at least 44x44px (for mobile help center)
21. No time limits on reading content
22. Auto-playing video/audio can be paused
23. Help center search has voice input option (for motor-impaired users)
24. Every article has a "last updated" date for content accuracy
25. Related articles are programmatically linked (not just visual)
26. Breadcrumbs are present and structured (for screen reader navigation)
27. Print stylesheet exists (some users print articles for offline reference)
28. No invisible focus traps
29. Content reading level is appropriate (aim for grade 8-10)
30. Privacy policy and support contact are accessible from every page
Score each item: PASS / FAIL / NOT APPLICABLE. Prioritize the FAILs by impact.

29. Voicemail drop script

Write 3 voicemail drop scripts for outbound customer success check-ins.
PRODUCT: [PRODUCT NAME]
CALL CONTEXT: [30-DAY CHECK-IN / RENEWAL APPROACHING / CHURN RISK]
Script 1 -- 30-day check-in (15 seconds):
"Hi [NAME], this is [YOUR NAME] from [PRODUCT]. Just checking in at your 30-day mark. Reply to this email or c

```
all me back at [PHONE] if anything's blocking you. Otherwise, I'll reach out next month. Have a great week."
Script 2 -- Renewal approaching (20 seconds):
"Hi [NAME], this is [YOUR NAME] from [PRODUCT]. Your renewal is coming up on [DATE]. I wanted to make sure you
're getting value out of everything. If you have 10 minutes this week, I'd love to walk through your usage and
make sure you're set up for the next year. Reply or call [PHONE]. Thanks!"
Script 3 -- Churn risk (25 seconds):
"Hi [NAME], this is [YOUR NAME] from [PRODUCT]. I noticed your team's usage has dipped this month. No pressure
-- I just want to make sure nothing's broken on our end. If there's an issue we can fix, tell me. If something
's not working for you, I want to know before your renewal comes up. Call me at [PHONE] or reply to this email
."
Speechify settings: narrate at 0.9x speed with a [WARM / FRIENDLY] voice. Export as MP3, under 30 seconds each
.
```

30. Audio-first help center article

```
Write a help center article designed audio-first (the audio version is the primary format, text is the transcr
ipt).
TOPIC: [HELP CENTER TOPIC]
PRODUCT: [PRODUCT NAME]
Structure the article for audio consumption:
- Write as spoken language, not written language (contractions OK, short sentences, no bullet lists in the nar
ration)
- Open with: "In this guide, you'll learn how to [do X] in [PRODUCT]."
```

- Narrate the steps conversationally: "First, head to your [SECTION] tab. You'll see it in the left sidebar, r
ight below [FEATURE]."

- Include verbal cues for navigation: "Look for the [ICON DESCRIPTION] icon -- it's the one that looks like [SH
APE/COLOR]."

- End with: "If that didn't work, check the troubleshooting section below, or reach out to support at [EMAIL].
"

After the audio script, provide:

- A condensed text version (the article body) formatted for scanning
- A list of screenshots to include in the text version (with alt text)
- Speechify voice recommendation: [VOICE TYPE] at 1.0x speed

This article will have the audio player at the TOP, text below it.

Part 5 -- Surfer SEO prompts (help center ranking)

31. Help center keyword research

```
Run keyword research for a help center SEO strategy.
PRODUCT: [PRODUCT NAME]
CORE FEATURES: [LIST 5-10 FEATURES]
COMMON SUPPORT QUESTIONS: [LIST 10-20 QUESTIONS FROM TICKET DATA]
For each question, determine:
- Search volume (if available from Surfer's keyword research tool)
- Keyword difficulty (Surfer's score)
- Whether the query is informational (how-to), navigational (login), or transactional (pricing)
- Whether the query has a high-intent modifier ("[product] how to [action]" vs. generic "[action]")
Prioritize the top 10 keywords to write articles for first, ranked by:
1. High ticket volume (this query drives support tickets)
2. Moderate difficulty (winnable for a help center subdomain)
3. Informational intent (help articles answer these best)
Output: a table with columns: Question/Keyword, Est. Search Volume, Difficulty, Intent, Priority Rank
```

32. Help article SEO optimization

```
Optimize this help center article for the target search query.
TARGET QUERY: [e.g., "how to set up two-factor authentication in [product]"]
ARTICLE: [PASTE ARTICLE TEXT]
Using Surfer SEO's Content Editor:
1. Check the Content Score -- what's the current score out of 100?
2. Compare to the top-ranking pages for this query. What's missing?
3. Target word count: [SURFER'S RECOMMENDATION] words (current: [COUNT])
4. Keywords to include (from Surfer's SERP analysis): [LIST]
5. Heading structure: [SURFER'S RECOMMENDED H2/H3 STRUCTURE]
6. Related terms to add: [LIST]
7. Missing topics that competitors cover: [LIST]
Make the specific edits:
- Add [MISSING KEYWORDS] to the intro paragraph
- Add an H2 section for [MISSING TOPIC]
- Expand the word count by [AMOUNT] words in the [SECTION] area
- Re-check Content Score after edits -- target 75+
```

33. Help center content gap analysis

Find content gaps in a help center's SEO coverage.

TOP 20 TICKET-DRIVING QUESTIONS: [LIST]

EXISTING HELP CENTER ARTICLES: [LIST TITLES OR PASTE SITEMAP]

For each ticket-driving question:

1. Is there a matching help center article? (YES/NO)
2. If YES: does it rank on page 1 of Google for the natural-language query? (Search it)
3. If NO: this is a content gap -- write a new article
4. If YES but not ranking: the article needs SEO optimization (use Prompt 32)

Output:

- Content gaps (questions with no article): [LIST] -- write these first
- Ranking articles (working): [LIST] -- maintain these
- Non-ranking articles (need optimization): [LIST] -- optimize these next
- Keyword cannibalization (two articles targeting the same query): [LIST] -- merge or differentiate

34. Internal linking strategy

Build an internal linking strategy for the help center.

ARTICLES: [LIST 20-30 HELP CENTER ARTICLE TITLES + URLS]

CATEGORIES: [LIST CATEGORIES]

Create an internal linking map:

- For each article, suggest 3-5 related articles to link to at the bottom
- Link the most important articles from the help center homepage
- Create "hub" articles (category overviews) that link to all articles in the category
- Identify orphan articles (no internal links pointing to them) and find homes for them
- Suggest anchor text for each internal link (descriptive, keyword-relevant, not "click here")

Output as a table: Article, Related Articles (with suggested anchor text), Orphan? (Y/N), Suggested Hub

35. Help center SEO performance report

Create a monthly SEO performance report for the help center.

DATA: [PASTE GOOGLE SEARCH CONSOLE DATA -- IMPRESSIONS, CLICKS, POSITION, CTR FOR HELP CENTER PAGES]

Report structure:

- Headline metric: "Help center drove [X] organic visits this month" (up/down [Y]% from last month)
- Top 5 articles by clicks (title, clicks, impressions, average position, CTR)
- Top 5 articles by impressions but low CTR (opportunity to improve titles/meta)
- Articles on page 2 of Google (positions 11-20) -- closest to breaking through
- Queries with high impressions but no matching article (new content opportunities)
- Articles that dropped in ranking (investigate: did the product change? is the article outdated?)

1-paragraph narrative for the support lead: "This month, the help center deflected an estimated [X] tickets via organic search. The [TOPIC] article is our biggest driver. We should write [MISSING TOPIC] next because it has [X] monthly searches and no article."

Keep the report under 400 words. No charts -- text only, designed to be pasted into an email or Slack message.

Part 6 -- Weekly production checklists

Checklist 1: Monday -- Ticket triage and content planning

- ☐ Pull last week's ticket data: top 10 questions by volume
- ☐ Identify any question that appeared 3+ times (deflection candidate)
- ☐ Check: is there already a help center article for each top question?
- ☐ If no article: add to the editorial calendar for this week
- ☐ If article exists but tickets are still high: flag for SEO optimization (Surfer)
- ☐ Review CSAT scores from last week -- any 1-2 star ratings to follow up on?
- ☐ Check for product releases this week -- will new features drive support questions?
- ☐ Write 1-2 new help articles using Copy.ai (Prompt 1 or 2)
- ☐ Update the editorial calendar with planned articles for the week

Checklist 2: Tuesday -- Article production and screenshots

- ☐ Draft today's help article using Copy.ai (ticket-to-article or release-note pipeline)
- ☐ Review the draft for product accuracy -- edit anything the AI got wrong

- ☐ Capture 3-5 screenshots of the product flow
- ☐ Annotate screenshots in Canva Pro (numbered circles, arrows, brand colors)
- ☐ Insert annotated screenshots into the article at the right steps
- ☐ Write the FAQ section (Prompt 13)
- ☐ Add related-article links at the bottom
- ☐ Run the article through Surfer SEO (Prompt 32) -- target Content Score 75+
- ☐ Publish to the help center

Checklist 3: Wednesday -- Video and audio production

- ☐ Identify 1-2 articles that would benefit from a video version (use Prompt 24 decision guide)
- ☐ Write the video script (Prompt 21 or 25)
- ☐ Generate the AI video in Synthesia (avatar, language, screen recording overlay)
- ☐ Embed the video above the written steps in the help center article
- ☐ For articles updated this week, generate audio versions in Speechify (Prompt 26)
- ☐ Embed the "Listen to this article" player below the video
- ☐ Verify video captions are present and accurate
- ☐ Add a text transcript below the video for accessibility

Checklist 4: Thursday -- SEO and accessibility

- ☐ Run Surfer keyword research (Prompt 31) -- any new high-volume queries to target?
- ☐ Check Google Search Console: which articles are on page 2 (positions 11-20)?
- ☐ Optimize 1-2 articles that are close to page 1 (Prompt 32)
- ☐ Run the accessibility audit (Prompt 28) on 3-5 articles published this week
- ☐ Fix any accessibility FAILs (missing alt text, no audio version, poor contrast)
- ☐ Check internal links (Prompt 34) -- are new articles linked from their category hub?
- ☐ Update the help center category landing page if new articles were added

Checklist 5: Friday -- Metrics and reporting

- ☐ Pull this week's help center analytics: page views, search queries, bounce rate
- ☐ Calculate estimated ticket deflection (views × historical deflection rate)
- ☐ Write the weekly metrics summary (Prompt 15)
- ☐ Send the summary to the support lead / VP
- ☐ Review next week's editorial calendar -- any ticket trends to get ahead of?
- ☐ Update the content gap spreadsheet (Prompt 33)
- ☐ Check for outdated articles (last updated > 90 days ago + product has changed)
- ☐ Plan next week's production schedule

Checklist 6: Monthly -- Content audit

- ☐ Audit all help center articles: accuracy, freshness, broken links
- ☐ Merge or archive thin/duplicate articles
- ☐ Check which articles have NOT been updated in 6+ months
- ☐ Verify all video tutorials still match the current product UI
- ☐ Re-run Surfer on the top 20 articles -- have Content Scores dropped?
- ☐ Check for keyword cannibalization (two articles competing for the same query)
- ☐ Update the help center homepage with the most popular articles
- ☐ Review the accessibility audit (Prompt 28) -- any items that moved from PASS to FAIL?

Checklist 7: Quarterly -- Strategy review

- ☐ Review ticket deflection trends -- is the help center reducing ticket volume?

- ☐ Which article categories deflect the most tickets? Invest more there.
- ☐ Which categories still drive high ticket volume despite articles? Investigate.
- ☐ Review the tool stack: is Copy.ai still the best article writer? Has a better tool launched?
- ☐ Review Synthesia usage: are videos being watched? Check video analytics.
- ☐ Review Speechify usage: are audio versions being used? Check play counts.
- ☐ Review Surfer results: are help center rankings improving month-over-month?
- ☐ Plan the next quarter's content production targets

Checklist 8: Product launch -- Help center readiness

- ☐ Get the release notes from engineering [N] days before launch
- ☐ Draft the help center article using Copy.ai (Prompt 2)
- ☐ Capture screenshots of the new feature in staging/beta
- ☐ Annotate screenshots in Canva Pro
- ☐ Write and produce a 60-second Synthesia walkthrough video (Prompt 21)
- ☐ Generate the audio version in Speechify
- ☐ Run the article through Surfer SEO -- optimize for the feature's search query
- ☐ Add the article to the relevant category landing page
- ☐ Write the in-app announcement banner copy (Prompt 11)
- ☐ Write the release-note email summary (Prompt 5)
- ☐ Add internal links from related articles to the new article
- ☐ Schedule everything to go live at launch time

Checklist 9: Churn prevention -- Content audit

- ☐ Identify the top 5 reasons customers churn (from exit surveys or CSM data)
- ☐ For each churn reason, check: is there a help center article that addresses it?
- ☐ If no article: write one using Copy.ai
- ☐ If article exists: is it ranking in Google? (Customers may be searching before churning)
- ☐ Write a re-engagement email sequence for churned customers (Prompt 9)
- ☐ Produce a "what's new since you left" Synthesia video (60 seconds, top 3 improvements)
- ☐ Generate an audio version of the re-engagement email in Speechify (for audio preferences)
- ☐ Track which re-engagement content drives reactivations

Checklist 10: Multilingual expansion

- ☐ Identify the top 3 non-English customer segments (from support ticket languages)
- ☐ Prioritize which help center articles to translate first (by ticket volume per language)
- ☐ Run the localization-ready rewrite (Prompt 14) on the top 10 articles
- ☐ Translate the articles (use professional translators, not just AI, for accuracy)
- ☐ Produce multilingual Synthesia videos (Prompt 23) for the top 5 onboarding articles
- ☐ Generate audio versions in Speechify for each translated article
- ☐ Set up language switching in the help center UI
- ☐ Add hreflang tags for SEO (so Google serves the right language version)

Checklist 11: Onboarding content production

- ☐ Map the first-30-day user journey (signup -> aha -> habit)
- ☐ Identify the 5-10 moments where users get stuck (from onboarding drop-off data)
- ☐ Write help center articles for each stuck moment (Copy.ai)
- ☐ Produce a 10-video onboarding series in Synthesia (Prompt 22)
- ☐ Generate audio versions of all onboarding articles (Speechify)
- ☐ Write the 5-email onboarding sequence (Prompt 12)

- [] Create the visual onboarding checklist (Prompt 18, Canva)
- [] Optimize all onboarding articles for SEO (Surfer) -- new users Google their first questions
- [] Embed the video series in the in-app onboarding flow
- [] Track onboarding completion rate before vs. after content production

Checklist 12: Quarterly tool-stack review

- [] Is Copy.ai still the best article-drafting tool? (Check: new features, pricing changes, alternatives)
- [] Is Canva Pro still the best screenshot annotation tool? (Check: new templates, AI features)
- [] Is Synthesia still the best AI video tool? (Check: new avatars, pricing, competitor landscape)
- [] Is Speechify still the best TTS tool? (Check: voice quality, language coverage, pricing)
- [] Is Surfer still the best help center SEO tool? (Check: Content Score accuracy, new features)
- [] Calculate total stack cost -- is it still cheaper than hiring one support content specialist?
- [] Check for new affiliate programs that might fit the support use case
- [] Update the tool-stack map if any tools have changed
- [] Re-verify pricing for all tools (prices change 2-3x/year)

Part 7 -- Tool-stack map

Job	Recommended tool	Plan	Price (verified July 2026)	Affiliate link
Help article drafting	Copy.ai	Chat (annual)	\$24/mo (\$288/yr)	https://www.copy.ai/?via=aitoolkit
Screenshot annotation	Canva Pro	Pro	\$144/yr (\$12/mo)	https://www.canva.com/?via=aitoolkit
AI video tutorials	Synthesia	Starter	\$19/mo (~\$14/mo annual)	https://www.synthesia.io/?via=aitoolkit
Audio versions	Speechify	Premium (annual)	\$159/yr (~\$13.25/mo)	https://speechify.com/?via=aitoolkit
Help center SEO	Surfer SEO	Essential (annual)	\$79/mo (\$948/yr)	https://surferseo.com/?via=aitoolkit

****Total stack cost:**** ~\$142/mo or ~\$1,707/yr for a 5-seat support team

****Replaces:**** 1 copywriter + 1 designer + 1 video producer + 1 voice actor + 1 SEO specialist

****Estimated ROI:**** Deflects 100-300 tickets/mo. At \$15/ticket fully-loaded support cost, that's \$1,500-4,500/mo in deflected cost -- the stack pays for itself 10-30x over.

Free / non-affiliate alternatives

Job	Free alternative	Limitation vs. paid
Help article drafting	ChatGPT Free / Claude Free	No team seats, no workflow automation, n
Screenshot annotation	Canva Free / Snipping Tool	No brand kit, limited templates, no Magi
AI video	Synthesia Free	10 min/mo, watermarked, 9 avatars only
Audio versions	NaturalReader Free	Limited voices, no batch processing, 1 l
SEO	Google Search Console (free)	No Content Score, no keyword research, n
