AI Google Business Profile Command Center (2026 Edition)

Product subtitle

The 40-prompt + 10-checklist system that compresses Google Business Profile updates, review replies, Q&A, photos posts, service content, and AI-search citations into one 90-minute weekly workflow - built for Copy.ai, Canva, Surfer, Jasper, and Speechify.

Description (sales copy)

Your Google Business Profile is the storefront most customers walk through and the one nobody maintains. The update cadence slips, the Q&A fills with questions you never answered, review replies take three days during the week you were short-staffed, and your best photos sit in a phone folder instead of the Profile. Meanwhile your competitor's Profile is being "maintained" by an agency that charges \$500/month for the same posts you could write in an afternoon - and in 2026 there's a third problem: Google's AI-written local overviews summarize businesses straight from their own Profiles, so stale content now reads as a stale business everywhere, not just on one listing.

The AI Google Business Profile Command Center is the week-in, week-out system for every production job the Profile actually demands. Inside you get 40 ready-to-copy prompts and 10 production checklists covering the five jobs that decide whether local customers call you or the next listing:

Reviews - the revenue job - five-star replies, one-star and unfair-review responses, review-request messages, and photo prompts that generate more reviews (every reply is public content with review keywords in it - this pack makes them count).

Posts, offers, events, and Q&A - What's New posts, limited-time offers, event posts, owner answers to seeded and real questions, and monthly Q&A seed lists with local keyword variants.

Photos, video, and visual identity - Canva post graphics sized to GBP, monthly photo-mission lists, locally worded captions, and short walkthrough videos from a written script.

The ranking content layer - service pages, location pages, and competitor-gap pages that give Google something real to rank and AI systems something real to cite (Surfer drafts and scores; Copy.ai fills voice).

The AI-search layer and brand-voice governance - the monthly citation audit: how ChatGPT, Perplexity, Gemini, and Google's own AI Overviews actually describe your business, and the Profile fixes that change the answer. Multi-location teams get Jasper prompts that lock brand voice across franchises.

Every prompt is built for the tools tested in the AI ToolKit GBP stack: Copy.ai Chat (\$24/mo annual, 5 seats included) or Jasper Pro (\$59/mo per seat annual) for written communications, Canva Pro (\$144/yr) for post graphics, Surfer (\$49/mo billed yearly, Discovery tier) for the ranking content layer, and Speechify Premium (\$29/mo monthly or \$139/yr) for reading surveys, guidelines, and competitor material on the go. The core configuration - Copy.ai + Canva - runs under \$40/month combined, roughly the price of one printed mailer that reaches no one searching.

What you get:

40 copy-paste AI prompts (PDF + Markdown), organized by the five jobs

10 production checklists, including the multi-voice consistency check and the monthly citation audit

The 90-minute weekly GBP workflow

Tool-stack map with verified October 2026 pricing and free-tier picks

Compliance guardrails built into every prompt: no customer PII in AI tools, no review-gating, every reply reads as written by a human who read the review

No agency retainer. No 20-tool "local SEO stack" to babysit. One weekly session that keeps the store's most-visited listing alive.

Price: \$17

The AI Google Business Profile Command Center

40 Prompts + 10 Checklists for Review Replies, Posts, Photos, Ranking Content, and AI-Search Citations

For: Owner-operators and marketing leads of local service businesses, restaurants, clinics, and retail shops - and the franchise teams keeping a dozen Profiles in voice

Built a

How to use this pack

Pick the section matching this week's bottleneck - reviews, posts/Q&A, photos, ranking content, or the citation audit.

Copy the prompt into your tool (Copy.ai or Jasper for written work, Canva for graphics, Surfer for ranking content, Speechify for reading material).

Fill in every [BRACKETED] field before running - generic inputs produce generic replies, and local buyers can smell a template.

Every review reply, question answer, and post is public-facing content on your most-visited sales page. Human review is not optional; it is the product.

Three rules before any prompt

Rule 1 - Never paste customer PII into a consumer AI tool. Prompts below use business facts and reply-usable information only - never reviewer names, employees' personal details, phone numbers, or account specifics. Reviewers' names don't need to enter the AI at all: "the Tuesday dinner reviewer" is a complete reference. Before feeding anything, check the tool's data-retention terms.

Rule 2 - Review integrity is a platform policy, a consumer law, and a trust asset. Never write or seed fake reviews. Never offer, promise, or imply anything in exchange for a review (that's review-gating, against Google's policy). Never post a reply that references a dispute detail you wouldn't read aloud in the store. Review replies are your public voice, permanently attached to your listing - written to persuade the next reader, not just to answer the reviewer.

Rule 3 - Never publish a claim you can't keep. "Open until 9pm," "free parking," "financing available" - the AI will happily write whatever facts you give it, and Google's systems (and sometimes AI Overviews citing your Profile) will repeat them verbatim. Verify every operational fact against your live hours, services, and price list before the prompt output leaves the outbox.

Ops b

Run it the same slot every week (most operators do Monday 8 AM before the phones wake up - or Friday 4 PM, when weekend search is about to peak). The monthly citation audit (P31-P34) replaces the ops block in week 1 of each month. The ops block prompts live in Part 5 (P36-P37 ops; P38-P40 quarterly). Everything else is covered by the single-use prompts in parts 1-5.

Part 1 - Review replies: the revenue job (8 prompts)

Six prompts write the replies; two generate the raw material. The reply block is first in the workflow because it's the highest-leverage 20 minutes of the whole session: most customers read owners' replies to reviews before choosing, and they read hardest for how a business responds to trouble.

- 1. The five-star review reply (varied, keyword-aware)

Act as the owner of [BUSINESS TYPE] in [CITY/NEIGHBORHOOD]. Write a reply to a

Act as a content strategist. I've pasted 10 review excerpts (keywords,

phras

8. The response-time triage sheet

Act as a local business ops manager. From this week's review/queue data:

[PAST

Part 2 - Posts, offers, events, and Q&A prompts (8 prompts)

The posts-and-Q&A block is the Profile's broadcast layer. Google treats a weekly or near-weekly posting cadence as a signal of a maintained business, and Q&A is pure conversion: unanswered questions sit on your listing looking like a business that leaves mail in the box.

9. The What's New post

Act as a local content marketer for [BUSINESS TYPE] in [CITY/NEIGHBORHOOD].

GBP p

Part 3 - Photos, video, and visual identity (6 prompts)

The visual block keeps the Profile looking alive. Profiles die visually in two ways: stale photo order (Google ranks recent uploads) and one-shot stock-looking graphics. These prompts keep both fresh on a zero-photographer budget. Canva is the tool; Synthesia turns a written script into a 60-90 second walkthrough video for service businesses with no video staff.

17. The Canva post-graphic prompt

Act as a Canva Magic Design brief-writer for [BUSINESS TYPE], brand

Part 4 - The ranking content layer (8 prompts)

The Profile ranks on its own merits, but the pages behind it decide how much surface area local search has to grab. Google's local ranking help documentation has always pointed at "prominence" - and in practice that means links and content authority the Profile alone can't carry. In 2026 this layer has a second customer: the AI search layer that synthesizes local overviews from Profiles, reviews, and authoritative local pages.

23. The service-page brief (Surfer)

Act as a local SEO strategist using Surfer. Target page: "[SERVICE] in

Part 5 - The AI-search layer and brand-voice governance (10 prompts)

The last block is what changed in 2026. AI search now sits between the customer and the map pack: Google's AI Overviews answer local queries from a synthesis of Profiles, reviews, and authoritative local pages, and AI answers are where a growing share of local discovery resolves. The first four prompts run the citation audit - how AI describes you today; the rest keep a multi-location operation on brand voice at scale. Jasper's shared brand-voice feature is the multi-location tool; Speechify is the reading layer for the material you'd otherwise never get through.

31. Ask the AIs what they say about you (citation audit)

Act as an AI-visibility researcher for a local business. Business:

[CITY

Use these as the weekly pre-publish screens. A checklist earns its place by catching a real failure mode - each one below exists because that failure happens weekly in real Profiles.

C1 - The weekly triage sheet (Minutes 0-10)

- ☐ Export/pull this week's new reviews (count, ratings, any negatives flagged)
- ☐ List unanswered public questions with age in days
- ☐ Note overdue reply (>72h) and overdue question (>24h) on top of the list
- ☐ Pull 1-2 photo opportunities spotted this week (delivery, before/after, team)
- ☐ Check last week's post performance (views on each)
- ☐ Write the one-line triage decision: reply block first or posts block first?

C2 - Every review reply (run before each reply sends)

- ☐ Reply names the specific thing the review names (not a generic thanks)
- ☐ Reviewer's name/personal details do NOT appear - the reply works without PII
- ☐ No dispute detail, staff-discrimination language, or blame-shifting
- ☐ Negative replies offer a direct human contact (person + channel, not a bare link)
- ☐ Positive reply includes the category phrase naturally (once max)
- ☐ Reads aloud as a human voice; no AI-template opener repeated from last reply
- ☐ The reply would make the NEXT reader feel safe choosing us

C3 - Review generation (weekly ask)

- ☐ This week's ask moment identified (completion/note/email/receipt)
- ☐ Single identical message for all customers (no gating language)
- ☐ Link/QR tested on a phone this week (it resolves to the correct listing)
- ☐ No incentive, discount, or reward offered or implied
- ☐ Ask count logged (we track asks vs reviews to keep the funnel honest)

C4 - Every post before it goes live

- ☐ One post per week minimum (two max, spaced at least 3 days apart)

- ☐ Post type matches the week's plan (offer/event/update/photo rotation)
- ☐ Names city/neighborhood naturally at least once
- ☐ Contains one specific detail (number, date, name, price) - no pure-adjective posts
- ☐ Facts verified live (hours, price, dates) - nothing the staff can't honor
- ☐ Photo attached, and it's a real photo (no repeated stock image twice in a row)
- ☐ Button matches the action (Book / Call / Learn more / Order)
- ☐ Proofread: no doubled spaces, no "[BRACKET]" placeholder left in, no truncated sentence

C5 - Q&A management

- ☐ All public questions aged >24h answered this week
- ☐ Seeded Q&A: 1-2 new pairs published monthly (asked AND answered by us, honestly labeled)
- ☐ No answer contains a prohibited claim (guarantees, superiority language)
- ☐ Upvoting natural questions only - never mass-upvote seeded items
- ☐ Every answer reads first-person owner voice; no third-party corporate speak

C6 - Photos and video

- ☐ At least one new photo uploaded this week (recency check passes)
- ☐ Cover/logo checked once a month (C6 runs monthly for this line)
- ☐ Caption names city/neighborhood naturally
- ☐ No photo contains: customers who didn't consent, staff faces without permission, competitor signage, license plates, or children without guardian consent
- ☐ Video (if posted): 60-90s, captioned, no copyright audio
- ☐ The photo set would convince a stranger this is an ACTIVE business - not a stock catalog

C7 - Ranking-content alignment (weekly 15-minute pass)

- ☐ This week's content block selected the page brief (P23/P24/P25) if queue permits
- ☐ Any drafted page's H1 carries the [service + city] phrase the Profile category matches
- ☐ Answer-block (P26) added/refreshed on at least one live page monthly
- ☐ GBP description and website first paragraph tell the same story (spot check)

[] At least one page links back to the GBP-attached site domain this week (reciprocal check)

C8 - Multi-voice consistency check (multi-location, weekly)

[] All location posts this week share the saved Jasper Brand Voice descriptor

[] Local flex items (landmarks, events, staff names) present per location post

[] Zero unauthorized offers/policy claims from any location

[] No two locations' posts open with the same sentence

[] Regional manager validation checklist (from P35) completed for every location

[] Flagged exceptions (missing inputs) held for manual review - not auto-published

C9 - The monthly citation audit (AI-search layer)

[] The 4 AI test queries (P31) run and screenshotted/logged - all four engines

[] Cited/not-cited status recorded with date in the tracking sheet

[] Any wrong fact about us quoted by an AI flagged on the fix list (P32 diagnosis)

[] The extractable description block (P33) live on GBP + website + top directory

[] Corroboration sweep (P34) run this month; mismatches submitted for fix

[] One citable asset published (service page refresh, answer block, or photo-rich post)

C10 - The monthly performance review (30 minutes)

[] Pull calls, direction requests, website clicks from GBP performance view

[] Compare vs last month, note the number that moved most

[] Attribute to a specific action taken (post cadence, review replies, new photos)

[] Record which post type got best engagement - repeat it next month

[] Check response rate: % of reviews replied, median reply time

[] Decide next month's single test (one variable only)

[] Log the one-line verdict in the tracking sheet: keep, adjust, or escalate

FAQ

Is this a course? No - it's production material. 40 prompts and 10 screens you copy, fill, and run. No videos to watch, no dashboard to log into.

Will this replace my agency? Not automatically. If your agency is writing your review replies and posts today, this pack does that production in-house in 90 minutes a week - many owners keep the agency for its judgment and take production back. But if the agency's whole retainer is GBP production, the pack does that job for under a coffee budget.

Do the prompts work with ChatGPT instead of the named tools? Yes - every written prompt runs in any capable assistant. The named tool matters for where the work lives afterward: Jasper's saved Brand Voice for multi-location consistency, Surfer's score for the ranking-content optimization pass, Canva's brand kit for graphics.

How is this different from a "local SEO checklist"? A checklist tells you what's broken. This is the production system that fixes it weekly - replies, posts, answers, graphics, page briefs, and a monthly audit of what AI search says about you.

What if I have one location, not ten? Skip the multi-location prompts (P35-P36, C8). The core weekly loop - reviews, posts, Q&A, one photo, one content move - still uses 20+ prompts.

Does Google punish AI-written posts? Google's guidelines for representing your business require that content is accurate and honest; they don't forbid drafting assistance. What violates trust and policy is fake reviews, bait offers, and claims your staff can't honor. Every prompt here drafts; you verify, edit, and publish under your name.

Post graphics, overlays, covers

Canva

Ranking content layer

Surfer

Reading layer (guidelines, surveys, competitor pages)

Speechify

Cost math, October 2026: the solo-operator core configuration is Copy.ai + Canva - \$432/year total (\$288/yr + \$144/yr), about \$36/month. Full five-tool stack for a multi-location operator, all annual: Copy.ai \$288 + Canva \$144 + Jasper \$708 + Surfer \$588 + Speechify \$139 = \$1,867/year, about \$156/month - and only the Copy.ai + Canva pair is mandatory; Surfer, Jasper, and Speechify enter where the jobs they own actually exist. Multi-location adds one Jasper seat per regional editor, not per store.

Tool notes and honest framings

Copy.ai - the review-reply and posting engine for a single location. Chat pricing at \$24/mo annual with 5 seats included is unusually generous: a two-person shop runs the whole product on one subscription. Start free; upgrade when the weekly session is a settled habit.

Jasper - worth the jump from Copy.ai only when you manage multiple locations with different hands posting. Its shared Brand Voice feature is the whole point: save the descriptor once in P35, and every franchisee drafts inside it. One-seat regional editors are the buyers; per-location seats are waste.

Canva - no-brainer tier. Keep the folder structure (one folder per location, subfolders per month) and the brand kit makes even rushed posts look consistent. Free tier covers everything in this pack; Pro matters if you also run social beyond the Profile.

Surfer - the only tool here with real scope risk. Its restructured tiers (Discovery \$49 / Standard \$99 / Pro \$182, all billed yearly) are cheaper than the 2025 plans, but it is a content-operations platform, not a button. If you won't publish service pages monthly, buy nothing - use the brief-style prompts (P23-P25) in Copy.ai and skip the score-driven workflow. If you will publish monthly, Discovery pays for itself against one outranked competitor page.

Speechify - optional, and honestly labeled as such. It earns its slot for operators who spend windshield time listening to audit readouts (P38's one-page version), employee survey verbatims, or long competitor pages. If you don't have reading backlog, skip it.

The AI Google Business Profile Command Center (2026 Edition) - instant download, PDF + Markdown, \$17. Affiliated tool links carry our tracking; prices verified against official pricing pages October 7, 2026 and change 2-3x per year - re-verify before purchase decisions.

For organizational use only. Not legal, Google-policy, or marketing-agency advice. Always follow Google's guidelines for representing your business, review platform policies, and applicable consumer-protection law. No guaranteed ranking or revenue results.
